Data Analyst | Python | SQL | ML & Predictive Modelling | Financial & Marketing Analytics | MSc Data Science

PROFILE

Data analyst with around 1.5 years of commercial experience across financial services and marketing analytics. At Marlborough Group Holdings, an FCA-regulated asset management firm, built Python-based ML segmentation models, automated ETL pipelines and financial reporting infrastructure used directly by senior investment, marketing and commercial leadership. Independent projects include Cointegrated, a live UK pairs-trading research platform built in Python with TimescaleDB and Docker, and an MSc dissertation on cryptocurrency volatility forecasting across 132,109 real financial records.

TECHNICAL SKILLS

ML & Analytics: XGBoost, SHAP feature importance, Optuna hyperparameter tuning, K-means segmentation, regression and time-series forecasting, cointegration testing and pairs selection, Kalman filter hedge ratio, statistical hypothesis testing, VADER NLP, cohort analysis, EDA and anomaly detection; Python (Pandas, NumPy, Scikit-learn, Streamlit)

Development: Python (Pandas, NumPy, Scikit-learn, FastAPI, openpyxl, SQLAlchemy, Streamlit - ML models, data pipelines, dashboards and automation), SQL (joins, CTEs, window functions, query optimisation, multi-source financial data extraction and transformation), Docker, Git/source control, R, HTML/CSS; Claude Code as daily workflow

BI & Reporting: Power BI (DAX, Power Query, star-schema modelling, dashboard design), advanced Excel (XLOOKUP, SUMIFS, Power Query, Power Pivot, formula automation), Tableau, ad-hoc and scheduled financial MI reporting, data profiling, cleansing and validation, self-serve analytical deliverables and stakeholder presentations

Domain: Financial services data analysis and reporting in regulated environments, marketing analytics and commercial insight delivery, senior stakeholder communication, translating business requirements into analytical specifications, data quality and governance, production documentation and SDLC delivery

WORK EXPERIENCE

Marketing Data Analyst - Fixed-Term Contract

Marlborough Group Holdings - FCA-Regulated Asset Management (Remote)

Apr 2026 - Present

- Built Python-based ML audience segmentation models and automated ETL pipelines in Python and SQL that gave senior marketing, sales and investment leadership first-time quantitative visibility into client acquisition patterns across individual, intermediary and institutional channels - writing Python end-to-end from raw data extraction through to model output and reporting
- Built Python and SQL pipelines to extract, validate and transform fund and client data across multiple complex financial sources, embedding reconciliation and quality controls throughout so every output reaching stakeholders was accurate, audit-ready and reproducible without manual intervention
- Rebuilt the UK sales sector data pipeline from scratch in Python, expanding coverage from 4 to 56 sectors with ISIN-matched validation - eliminating a recurring multi-hour manual process and producing cleaner, faster financial reporting each cycle
- Built GA4 digital analytics and Monday.com API-connected dashboards alongside a SharePoint Copilot AI agent, giving leadership consistent cross-channel visibility and enabling the team to access procedure documents in natural language

Data Analyst Intern

Uptrail Ltd, London

Nov 2025 - Jan 2026

- Maintained and enhanced Power BI dashboards for marketing and business stakeholders, ensuring consistent, up-to-date visibility into campaign and performance metrics that supported weekly decision-making
- Extracted and validated data using SQL, producing clean, reliable datasets that underpinned stakeholder reporting and removed the need for manual cross-checking
- Built Power Automate workflows to eliminate manual handoffs across reporting processes, freeing team capacity for higher-value analytical work
- Produced management information and financial performance reports for senior stakeholders, with data quality controls embedded at every stage to ensure accuracy under business scrutiny

Data Scientist

Zomato, Gurugram, India

Apr 2024 - Sept 2024

- Developed Python-based customer segmentation and cohort analysis on 50,000+ order records to identify high-value and high-churn segments, producing commercial findings that directly shaped re-engagement and campaign strategy
- Built demand forecasting models in Python using regression and time-series techniques across 12 delivery zones, improving predicted vs actual order volume alignment and enabling more effective operational planning
- Designed SQL-driven KPI pipelines covering cancellation rate, average basket size and zone utilisation, giving management daily operational visibility that previously required manual weekly collation

KEY PROJECTS

Cointegrated - UK Equity Pairs-Trading Research Platform - Independent Build, 2026

- Showed that a UK pairs-trading strategy's edge is not distinguishable from luck (deflated Sharpe 41%) and disappears when trading costs double, using out-of-sample testing that never touched the pair-selection data
- Traced one pair's entire loss to a single corporate event (May 2024) and documented the missing stop-loss as a limitation
- Replaced manual data refreshes with an automated daily pipeline (Python, TimescaleDB, Docker, cron) feeding an append-only paper-trading record and a live Streamlit dashboard | [Live Dashboard](#) | [GitHub](#)

Sentiment-Augmented Cryptocurrency Volatility Forecasting - MSc Dissertation, 78%

End-to-end ML forecasting system across 132,109 real financial records; XGBoost with VADER sentiment signals, SHAP feature importance, Optuna hyperparameter tuning, statistical hypothesis testing throughout; identified and resolved a critical data integrity issue pre-deployment | [Live Dashboard](#) | [GitHub](#)

Automated Factsheet Checking Platform - Marlborough Group Holdings, 2026

Python/FastAPI production platform that automates financial data quality and compliance checks across 15 strategic partner fund ranges; validates data against defined acceptance criteria, flags discrepancies and produces structured Excel audit output - replaced a compliance-critical manual process with a fully documented, repeatable pipeline in a regulated environment

Independent Power BI Dashboards

Bank Loan Analysis Dashboard ([View Dashboard](#)) | Retail Sales & Commercial Performance Dashboard ([View Dashboard](#)) - self-initiated builds demonstrating end-to-end dashboard design, star-schema modelling and commercial analytics delivery

EDUCATION

MSc Data Science (2:1, Dissertation 78% Distinction) - University of Greenwich, London - 2024-25

BSc Data Science & Analytics (8.59 GPA) - Sharda University, India - 2021-24
